

## **RECIPE: Acrylic Gesso**

Dissolve

10g Cellulose Glue K 1000 thick (63610) in  
700 ml of water.

Add

150 ml Plextol D 498 (76000),  
200g Marble Dust (58500) and  
400g Blanc Fixe (58700).

To make the Gesso opaque, add

100g Color Paste Titanium White (27000)

strain the gesso.

This recipe will make about 1 litre of gesso.

Applied as a thin ground on canvas or paper, this gesso provides an elastic surface.  
Thicker gesso layers can be sanded if applied onto wood.
