

## RECIPE:        **Gouache Paint**

### **The binding medium:**

100 ml                    **67710 Polyvinyl alcohol liquid**  
0.0.2 - 0.2 g            **78740 Preventol ON extra** as a preservative (if necessary)

Add Preventol to Polyvinyl alcohol liquid and wait for it to dissolve completely.

### **Colors:**

Almost all pigments are suitable to be used for Gouache.  
Coarse pigments and sands and e.g. Verdigris are not suitable.

Grind pigment and binding medium into a soft paste with a muller.

Instead of pure pigments you can also use a ready made color paste.

Add 3-5% Titanium White to synthetic pigments for better opacity, and add 78032 Orotan 731 K to help disperse fine particles.

Add water as desired when you are ready to paint.
